28 hours

Version X.X

General Quality Analysis: The overall quality of the application is assessed as **Low**. The application's primary functionality including creating ZIP files and compressing images functions only partially. Additionally, several significant issues were identified during testing. Specifically, the Automatic Optimization feature is non-functional, the size of large images does not meet the specified requirements, and no folder path can be selected during folder selection. A total of **32** defects were identified. Functional defects account for the majority of the reported issues, with **17** classified as Major and **11** classified as Average severity. A detailed quality analysis is presented below.

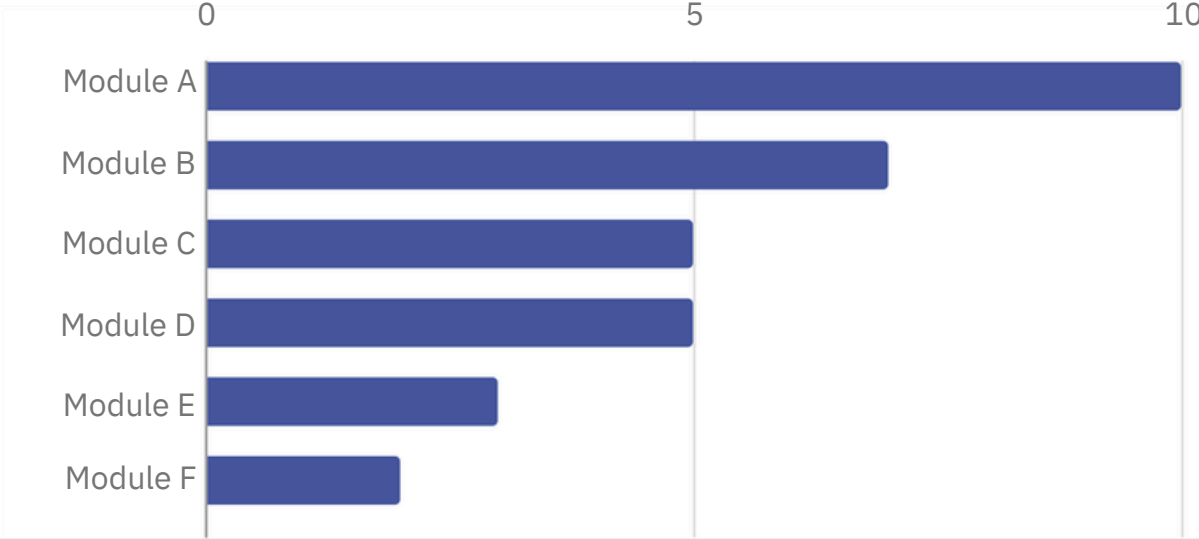

Detailed Quality Analysis

The total number of defects by severity

The chart shows the statistics of defects by the degree of the negative impact they have on the application. Almost **88%** of issues have **Major** and **Average** severity.

The total number of defects by components

The chart represents the number of defects identified across individual modules. The majority of issues were found in **Module A** (10) and **Module B** (7).

Quality of separate modules

Module	Quality	Comments
Module A	Low	The quality of this module is assessed as Low, as its primary functionality does not operate as expected. Other notable defects include folder directory selection (BUG-001) and ZIP file creation (BUG-002).
Module D	Medium	The quality of this module is assessed as Medium, as core functionality works as intended but several issues remain. The most significant defects include the Order by Random function not functioning (BUG-003) and problems with the Set as Cover feature (BUG-004).
Module E	Low	The quality of this module is assessed as Low because several functions do not operate correctly. The most significant issues include the language not changing (BUG-005) and branding element not being added to large images (BUG-006).
Module C	High	The quality of this module is assessed as High. No significant defects were identified during testing.
Module B	Low	The quality of this module is assessed as Low because several key functions do not operate correctly. The most significant issues include the Automatic Optimization function not working (BUG-007) and non-functional sliders (BUG-008).
